AMENDMENTS

In the Claims:

1. (Currently Amended) A system configured for providing access to product development and enhancement information, comprising:

a server configured with a database of product related data to assist with product design, said server capable of ~~[allowing a user to input]~~ receiving information input into the database for upload to said server including product identification information ~~[of said user]~~, and allowing a user to download information from the database including service enhancement and upgrade opportunities;

at least one computer;

an input means for ~~[filtering information]~~ allowing interface of transmission data between the user and the server; and

an interface between the at least one computer and the server.

2. (Original) A system as claimed in claim 1 wherein the product information from the user is reviewed for potential service opportunities.

3. (Original) A system as claimed in claim 1 wherein the input means comprises a wizard.

4. (Original) A system as claimed in claim 1 wherein access to said server is configured to be secured by user password.

11. (Currently Amended) A method for providing access to product development and enhancement information for internal users and external users using a system which includes a server and at least one user computer, the method comprising the steps of:

uploading product information [~~of a user~~] to the server;

downloading from the server, web pages configured to direct internal and external users to a database of related product information within the server, the database configured with [~~remediation programs, and~~] product enhancement and product development data;

uploading user selections input into the web pages to the server;

downloading from the server product and development opportunities responsive to [~~the user~~] supplied data; and

using an input means to allow interface of transmission data [~~filter information~~] between the user and the server.

12. (Original) A method as claimed in claim 11 further comprising the step of configuring the server to be secured by user password.

13. (Original) A method as claimed in claim 11 wherein the product information from the user is reviewed for potential service opportunities.
